### Experience & Skills

---

#### Invozone Pvt.

Lahore, Pakistan

Software House/IT Company

#### Software Engineer:

Oct 2022 – Present

I have worked as a Software Engineer on several technologies like **React.js, Typescript, Electron.js, Gatsby, Strapi, GraphQL, WordPress**, and more.

- **Quiz Management Portal:**

- Worked on a project which was a **WordPress plugin** responsible for creating questions and **managing quizzes**.
- Worked on **quiz taking** and **showing results** to the students and teachers.

---

#### Nextbridge Pvt.

Lahore, Pakistan

Software House/IT Company

#### Software Engineer:

Apr 2021 – Oct 2022

I have worked as a Software Engineer on several technologies like **PHP, Laravel, Vue.js, React.js, WordPress, Symfony**, and **Salesforce**.

- **Job Portal Project:**

- My responsibility on this project was to **ensure a bug-free and smooth user enrollment** and I ensured that the user can smoothly **register and enroll** into the system.
- Another responsibility was to **create new features** for the project, so I converted the system to **multi-tenant** on the **client's requirement**.
- My responsibility was to **manage the deployments** as well. So I worked on creating instances and **managing them for the client**.
- Over all user **experience was enhanced** and the client was happy with the **performance** and given a **good review** at the end of the **project**.

- **Event Management Project:**

- This project was for managing **online and offline events** and was responsible for creating an event and **collecting payments** from users.
- My **responsibility** was to ensure the **payments are working** fine because there were **duplicate** payments on the system. So I fixed this main issue and **enhanced the user experience** by showing all the **success and error messages** to the user.
- This project also needed a **new feature of coupons for the subscriptions** so I created this as well. I created a new module for **managing the coupons** for the users.
- Overall the **client was happy** with the performance and gave a **good review** at the end of the project.

- **Other Projects:**

- Developed **REST APIs** for a **WordPress plugin** from scratch. Did manage all the APIs for the main **plugin and the addons** as well. Added a module in the plugin for **API key generation** for **authentication** and **QR code**. Used **JS QRcode Generator** library for this purpose. Used **WordPress application password** functionality to generate API tokens.
- Worked on a project which was built on **WordPress** but wanted to convert it to **Laravel**. I gathered all the **requirements** from the **WordPress developer** and worked on this project as a **back-end developer** and supervised a **front-end developer**. Given this client a complete solution of CMS. The whole front end was controlled by Admin including content, images, and videos. Added complete user **roles and permissions** with **user registration** including **email templates** with user **authentication codes** and emails to admin and user back and forth.

Other than that I have got a chance to learn **Laravel LiveWire, Laravel PWA, Laravel Inertial, Salesforce, Symfony, React.Js, Vue.Js**, and more things related to ubuntu servers alongside other things as well.

---

**Ashtext Solution**  
Software House/IT Company

Lahore, Pakistan

**Web Developer:**

Jun 2020– Mar 2021

I have worked here as a **PHP Developer** and gained a vast experience in PHP by working on different **frameworks** and **tools**.

- I have worked on two **Laravel projects**, two **WordPress projects**, built two **WordPress plugins**, one **CodeIgniter project**, a **chrome extension**, and two projects on an old PHP framework **RocketSled**.
- I have used **Ubuntu** as an operating system and gained experience in managing **virtual hosts** and working with **servers**. I also worked with **Apache Server** and **Nginx**. I also have worked with **ngrok** for webhook testing.
- For **Front-End development**, I have worked on **vue.js** a little in **Bagisto**.

Overall I have gained a very decent amount of experience in **PHP as a back-end developer** from this firm.

---

**ERS Technology**  
Software House/IT Company

Lahore, Pakistan

**Web Developer (Part-Time):**

Nov 2019 – Mar 2020

- My main responsibility was the **back end** of different websites, web applications, and projects.
- Used **PHP/CodeIgniter** as a back-end programming language/framework and for **server-side** scripting.
- We developed different **HTML Templates** and Projects by using a combination of different languages such as HTML, CSS, JavaScript, jQuery, Ajax, Bootstrap, etc.

---

## Certificates

### Hackerrank

- Got a **Javascript (Intermediate)** [certificate](#) from HackerRank.
- Got a **Python (Basic)** [certificate](#) from HackerRank

---

## Education

**VIRTUAL UNIVERSITY OF PAKISTAN**  
Bachelor in Software Engineering (**2.98 CGPA**)

Lahore, Pakistan  
2015-2019

**BOARD OF INTERMEDIATE & SECONDARY EDUCATION**  
Intermediate in Computer Science

Lahore, Pakistan  
2013-2015

---

## Academic & Projects

### Learning Management System — Final Year Project

Web Application – Tools: PHP, HTML, CSS, Bootstrap, JavaScript, jQuery, Ajax

**Developer & Designer:**

Nov 2018 – May 2019

**Documentation:** Prepared documentation for my project and developed an essential skill of requirement gathering and planning of the development process of the project.

**Design Process:** Furthermore, planned the internal working of the project with the help of diagrams e.g. ERD, Database Diagram, Class Diagram, Architectural Design and Sequence Diagram, etc.

**Development:** Finally, developed the application with the help of information gathered in the documentation and design process. By setting up the application and solving many/different problems along the way, I gained vast experience in the actual development of any application.

---
